

MBT Care Instructions

Clean soiled MBTs as soon as possible, so dirt does not become ingrained.

Clean them by hand with a sponge and diluted soapy water up to 30 °C. Let them dry well, sidewise at room temperature. Do not wash MBTs in the washing machine!

Please lay wet MBTs on their side and allow to dry at room temperature (never close to direct heat) before you use them again. The Masai Sensor, in particular, has to be completely dry.

Avoid contact with aggressive liquids (acids, disinfectants, ...), salts, grease, fertilisers, protein or blood and other aggressive substances.

Do not cause mechanical damage to the Masai Sensor with sharp objects.
